Project Instructions

As outlined in the project proposal, this work comprises **two tasks**: **(A) Next-POI** and **(B) Itinerary Recommendation**.

0.1   Task A: Next-POI

Where to find it. See the folder `Task A_notebook & data/`, which contains the primary `.ipynb` notebook and the required datasets.

Notes. Task A follows the Next-POI setup described in the report (Foursquare NYC & Tokyo check-ins; chronological, leakage-free splits; baseline vs. sequence-aware model).

0.2   Task B: Itinerary Recommendation

Where to find it. Use the GitHub repository: `https://github.com/mlbyrt/travel-rec-system.git`.

How to run. Implementation and usage details (setup, dependencies, API keys, and execution examples) are provided in the repository's README. The system integrates Google Places and Yelp Fusion APIs as described in the report.
